

The high-efficiency nitrogen fertilizer

CAN: Calcium Ammonium Nitrate

The high-efficiency nitrogen fertilizer

Product description

Calcium Ammonium Nitrate (CAN), which is a granulated nitrogen fertilizer, guarantees a secure supply of nitrogen to plants. The combination of ammonium nitrogen and nitrate nitrogen makes CAN an all-rounder for all fertilizer applications.

The excellent granulation and specific surface treatment guarantee optimal storage, while providing for very good spreading properties with working widths of over 40 meters.

Technical data

Total nitrogen (N)	27%
including nitrate	13.5%
including ammonium	13.5%

The advantages at a glance

- 1 A combination of nutrients precisely adjusted to crop needs
- 2 Nitrate nitrogen for immediate action and ammonium nitrogen for lasting supply
- 3 Reduces the need for lime
- 4 Granulated in well-proven quality for secure storage
- 5 Balanced range of granule sizes and high specific weight for secure, even distribution up to large spreading widths of over 40 meters
- 6 Targeted crop management through split applications of fertilizer
- 7 Non-hazardous: provides a secure alternative to AN
